Calibrated gauge moulding system

Calibrated gauge moulding system with manual and motorised register, equipped with hydraulic ejector piston and reaction plate applied to the screw press.
Useful in **vertical moulding** to calibrate the length of the moulded piece *(e.g. engine valves, half shafts, bolts).*

This system calibrates the length of the cylindrical part of the moulded piece, ensuring **versatility and quick adjustment**.
FTB gauge moulding systems are also **equipped with a workpiece extractor as standard**.
